American Dy® 4295 Charter Street Los Angeles, CA. 90058 www.americandj.com User Instructions

Emerald BeamTM

General Introduction

Introduction: Thank you for purchasing the American DJ_® Emerald Beam[™] The Emerald Beam[™] The Emerald Beam[™] is a unique green laser effect that creates different patterns. The unit uses eight internal mirrors to bounce the laser reflection over a wide area. This unit has a sound-active mode that allows the unit to reflect on all eight mirrors. The unit's sound sensitivity may be adjusted by a sensitivity adjustment on the bottom of the unit. The unit may be mounted in either a horizontal or vertical position.

Unpacking: Every Emerald Beam[™] has been thoroughly tested and has been shipped in perfect operating condition. Carefully check the shipping carton for damage that may have occurred during shipping. If the carton appears to be damaged, carefully inspect the unit for any damage and be sure all accessories necessary to operate the system have arrived intact. In the event damage has been found or parts are missing, please contact our toll free customer support number for further instructions. Please do not return the unit to your dealer without first contacting customer support.

Customer Support: American DJ_® provides a toll free customer support line, to provide set up help and to answer any question should you encounter problems during your set up or initial operation. You may also visit us on the web at www.americandj.com for any comments or suggestions. For service related issue please contact American DJ_®. Service Hours are Monday through Friday 9:00 a.m. to 5:00 p.m. Pacific Standard Time.

Emerald BeamTM

Control & Functions

Operation

1. Audio Sensitivity Knob - This adjust audio sensitivity of the internal microphone (2). Turning the sensitivity knob in the clockwise direction will increase the sensitivity to sound. Turning the knob in the counter clockwise direction will decrease the fixture's sensitivity to sound.

2. Microphone - This microphone receives external low frequencies to trigger the unit in Sound-Active mode. This microphone is designed to receive low frequency sounds only, tapping on the microphone and high pitch sounds may not trigger the unit.

3. Power Cord Connection - This connection is used to supply main power to the fixture. Use only the supplied I.E.C. power cord. Be sure the main power matches the required power of your fixture.

4. Fuse Holder - This housing stores the 2 amp GMA protective fuse. Always replace with the exact same type fuse, unless other wise instructed, by an authorized American DJ_{\odot} service technician.

Emerald Beam[™]

Power Supply: This unit is available in both 120v and 220v options, before plugging your fixture in be sure the source voltage in your area matches the required voltage for your American DJ_® Emerald Beam.[™]

General Operation: *Plug and Play operation.* This fixture is designed to operate as a stand alone unit to sound. The Emerald BeamTM is ready to be plugged in, out of the box, there is no power switch. After plugging the fixture in the laser will immediately begin to cycle through the many built in programs. The programs cycle through automatically when the unit is operating and may not be selected manually. The unit requires sound to operate and will automatically blackout without sound to conserve laser life. If the unit does not turn on after the unit has been plugged in, be sure the sound sensitivity is tuned up (1), fuse has not blown, and the unit is properly plugged in to a matching wall outlet. If problem continue to persist, please contact customer support for further instructions.

Sensitivity Knob: A sound sensitivity knob is located on the rear of the unit. Use this knob to regulate the amount of sound it takes to trigger the unit. Turning the knob in a clockwise direction will increase the units sensitivity to sound, turning the knob in a counterclockwise direction will decrease the units sensitivity. Turning the knob completely to the counter-clockwise direction will turn off the sound-active mode.

Emerald BeamTM

Cleaning

Fixture Cleaning: Due to fog residue, smoke, and dust cleaning the internal and external lenses should be carried out periodically to optimize light output.

- Use normal glass cleaner and a soft cloth to wipe down the outside casing.
- Clean the external optics with glass cleaner and a soft cloth every 20 days.
- Always be sure to dry all parts completely before plugging the unit back in.

Cleaning frequency depends on the environment in which the fixture operates (I.e. smoke, fog residue, dust, dew). In heavy use we recommend cleaning on a monthly basis. Periodic cleaning will ensure longevity, and crisp beam output.
